

Enhanced Use Cases for Customers

1. **Customize Orders:** Customers can modify dishes (e.g., remove ingredients due to allergies, add extras) before adding them to their cart.
2. **Repeat Last Order:** Allows customers to quickly re-order a previously ordered meal, enhancing convenience for regular customers.
3. **Schedule Orders:** Customers can schedule orders in advance for a specified time and date.
4. **Participate in Loyalty Programs:** VIP customers earn points with each order, which can be redeemed for discounts or free items.
5. **Provide Feedback:** After dining, customers can provide feedback on food and service quality, contributing to the platform's quality control.

New Use Cases for Stores

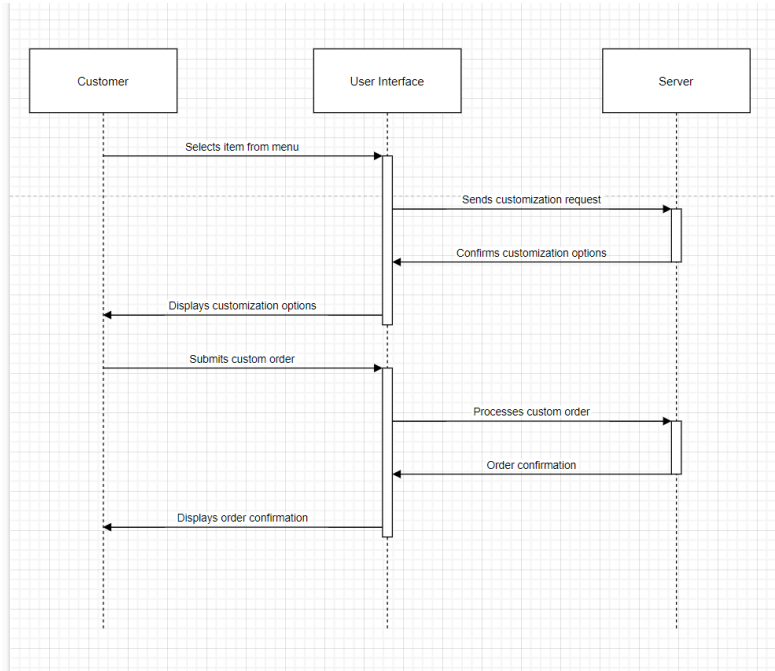

1. **Update Menu Items:** Chefs or managers can update the menu to add, modify, or remove items based on availability or seasonality.
2. **Handle Special Requests:** Chefs can receive and respond to custom order requests, such as dietary restrictions or special occasion notes.
3. **Manage Inventory:** Managers can keep track of ingredient availability and order supplies as needed.
4. **Analyze Sales Data:** Access to analytics tools that allow stores to understand popular items, customer preferences, and peak ordering times.
5. **Promote Specials:** Managers can create and promote special dishes or discounts directly to customers through the platform.

Expanded Use Cases for Surfers

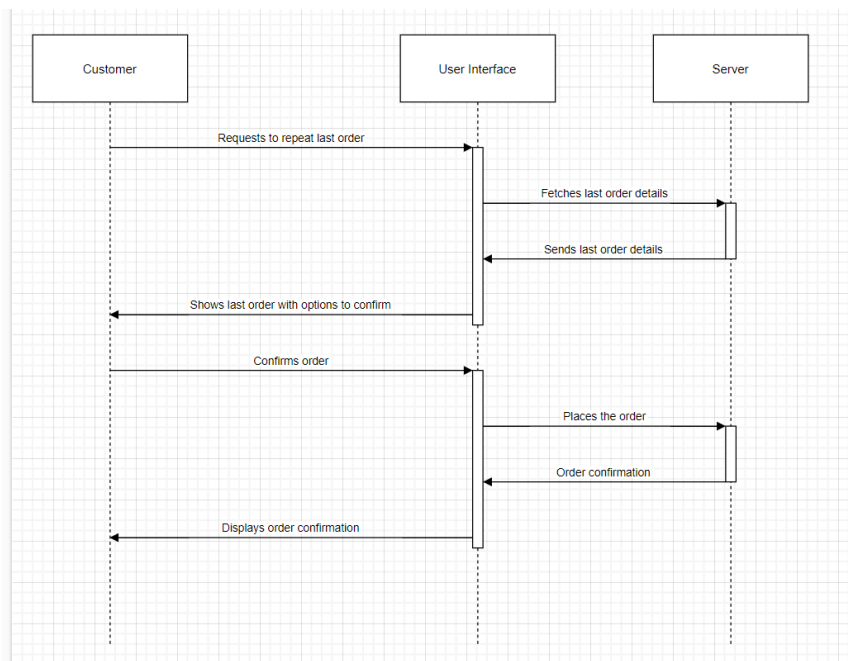

1. **Create Account:** Surfers can register to become customers directly from the browsing interface.
2. **Subscribe to Updates:** Surfers can subscribe to receive updates or special offers from their favorite restaurants.
3. **Interactive Menu Exploration:** Surfers can interact with a more dynamic menu display, such as sorting by popularity, dietary restrictions, or ingredient preferences.
